

## U15BE

1 x 15" Subwoofer

The U Series is a feature-rich range of products, specifically designed for a diverse and flexible range of installation applications. You could quite literally use the U Series anywhere that requires high quality audio for main or fill speaker duties. The sizes are perfectly suited to any environment, whilst maintaining a very high sound quality across the whole series.

We designed the U Series as a cost-effective and scalable solution, which is both versatile, and practical. The design methodology was to create a range of speakers, which would allow the system integrator or consultant to feel highly confident when specifying U Series, for a multitude of applications, from a conference room, to a balcony fill speaker.

As an example, you could ensure all zones in a nightclub venue are covered, without going anywhere close to the budget limit. Try bolting the U10B subwoofer to a low ceiling, and fill the zone with a combination of U08E, and U04 loudspeakers. You would be pleasantly surprised with by results!

There is no longer a need to compromise on the sound quality and coverage requirements of your next installation project, because LAX has got it covered with the new U Series range of loudspeakers.

### Applications

Conference Room or Hall, Background Music in Restaurant and Shopping Mall.

### Features

- Direct radiating subwoofer enclosure
- Single 15" high performance driver
- Pole mounted socket
- Ideal for U08BE sub bass extension

# U SERIES

## Specifications
